Letter of interest

With this I would like to confirm a large interest and involvement in short rotation coppice (SRC) development from Métropole Européenne de Lille (MEL).

MEL did appreciate to cooperate with SRCplus project consortium, in particular with Aile association. I am pleased to continue a relationship with Aile Association under the SRCplus project and after it.

Previous collaboration with SRCplus project

In 2016, MEL had fruitful collaboration with the project consortium in the following ways:

- Séverin Poutrel from "Burgeap" was responsible of a study to find opportunities for energy recovery regarding four topics : energetic crops, geothermal, wind, photovoltaic. Séverin decided to contact Jacques Bernard from "Aile" concerning the energetic crops opportunities. This first approach was done on the overview of 36 sites.
- During several phone calls and e-mails from June to September between Séverin Poutrel and Jacques Bernard, some information on good practices was disseminated from handbook within the SRCplus project. Séverin Poutrel and Jacques Bernard proposed to organise a conference call with me the 7th of October 2016. During this conference call, Séverin Poutrel and me did the revue of the first results of the evaluation of the 36 sites regarding energetic crops on technical aspects with expertise of Jacques Bernard.
- After this conference call, MEL will present the opportunity of implementing SRC on some selected sites.
